

From the BMJ

The problem facing the prescribing
doctor today is choice.
Catalogues of drugs—no
matter how detailed—are
of little help unless
accompanied by advice
on which drug to give for what condition.

Today's Drugs/3

The third and final volume of the
'Today's Drugs' series, like its predecessors, is based on *B.M.J.* articles
revised and brought up to date by their authors. It deals with
respiratory agents, drugs acting on the central nervous
system, and a miscellaneous group of drugs.

Demy Octavo Paperback 191 pages
Price £1.25 (U.S.A. \$3.75) including postage

Today's Drugs/2

deals with hormones and oral
contraceptives, cardiovascular agents, and drugs acting on the
gastrointestinal tract. As with the first volume the articles have been
revised to bring them up to date.

Demy Octavo Paperback 204 pages
Price £1.00 (U.S.A. \$3.00) including postage

Copies of Today's Drugs (12 & 13) are available direct from

The first live mumps vaccine.

Prevention of mumps is now possible with only one subcutaneous injection of 'Mumpsvox'. And if the pattern of antibody response to 'Mumpsvox' seen over the last six years persists, this will provide a basis for expectation that immunity will be permanent.

Side effects are uncommon, and soreness is unlikely at the injection site.

- * 'Mumpsvox' is presented as a single-dose vial with a disposable syringe.
- * 'Mumpsvox' induces protective antibodies in practically all non-immune recipients.
- * No significant side effects reported in studies which included more than 200 adult males.
- * Adequate antibody levels, with continuing protection against mumps, have persisted for six years without substantial decline in children vaccinated with 'Mumpsvox'.
- * There have been no reports of the transmission of mumps from vaccinated patients to susceptible contacts.

**To help avoid the discomfort,
the inconvenience—and the
possibility of complications**

MUMPSVAX®

Mumps Virus Vaccine, Live, MSD Jeryl Lynn Strain

'Mumpsvox' is supplied in a single-dose pack containing one 0.5 ml vial of lyophilised vaccine and one disposable syringe containing diluent. More detailed information is available to physicians on request.
