

For his tomorrows . . . we work today

Helpless—but not unhelped! While he sleeps the unceasing search goes on for new or better antigens to protect him from infectious diseases once regarded as unavoidable hazards.

Take whooping cough, the world's No. 1 killing disease of babies in the first year of life. By perfecting precise methods of making and testing pertussis vaccines Glaxo research has materially helped to raise whooping cough immunisation to its present high level of effectiveness. Significantly, it was Glaxo workers who

were asked to assist in the preparation of the British Standard Pertussis Vaccine which was subsequently accepted as the International Standard. Every batch of Whooping Cough Vaccine Glaxo (and combined antigens containing it) measures up to these same high standards.

The primary immunising course with Whooping Cough Vaccine Glaxo is three 1 ml injections; the first injection should be given at not later than three months of age.

GLAXO PRODUCTS FOR PROTECTION

Whooping Cough Vaccine

Triple Antigen (Diphtheria-Tetanus-Pertussis)

Prophylactic and separate antigens.

POLIVIRIN poliomyelitis vaccine*

Freeze-dried B.C.G. Vaccine, Haemophilus Influenzae

gives 24 hour protection to
hands and skin

Adequate protection is ensured by using Saroul after work—it is scientifically compounded to remove grime and dirt quickly and completely. It is not a harsh antiseptic but a cleansing agent which assists the natural healing processes and extends its protective effect for many hours. Saroul is a positive safeguard against industrial dermatitis.

Testing samples and literature free on request to Dept. CS.
