

*For his tomorrows . . . we work today*

Helpless—but not unhelped! While he sleeps the unceasing search goes on for new or better antigens to protect him from infectious diseases once regarded as unavoidable hazards. Take whooping cough, the world's No. 1 killing disease of babies in the first year of life. By perfecting precise methods of making and testing pertussis vaccines Glaxo research has materially helped to raise whooping cough immunisation to its present high level of effectiveness. Significantly, it was Glaxo workers who were asked to assist in the preparation of the British Standard Pertussis Vaccine which was subsequently accepted as the International Standard. Every batch of Whooping Cough Vaccine Glaxo (and combined antigens containing it) measures up to these same high standards.

The primary immunising course with Whooping Cough Vaccine Glaxo is three 1 ml injections (or three  $\frac{1}{2}$  ml injections if the Glaxo half volume vaccine is used); the first injection should be given at not later than three months of age.

#### GLAXO PRODUCTS FOR PROTECTION

The following vaccines are available in two concentrations, which provide a full dose of antigen in either 1 ml (standard vaccine) or 0.5 ml (half-volume vaccine)

#### WHOOPIING COUGH VACCINE

##### TRIPLE ANTIGEN

*(Diphtheria-Tetanus-Pertussis Vaccine)*

##### DIPHTHERIA-PERTUSSIS PROPHYLACTIC

##### TETANUS TOXOID

##### PERTUSSIS-TETANUS PROPHYLACTIC

##### DIPHTHERIA-TETANUS PROPHYLACTIC

The products below are available in standard dilutions only

##### DIPHTHERIA PROPHYLACTIC *(Formol Toxoid)*

##### \*POLIVIRIN *(poliomyelitis vaccine)*

##### Freeze-dried B.C.G. VACCINE

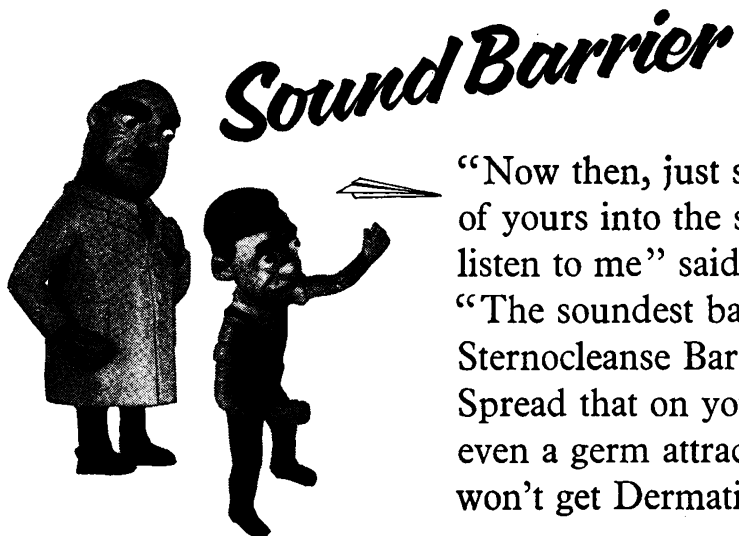

##### \*INVIRIN *(bivalent influenza vaccine)*

##### STAPHYLOCOCCUS-TOXOID

**Introduction to the Diagnosis of and Expert Opinion on Silico-tuberculosis**  
(German original title: Einführung in die Diagnostik und Begutachtung der Siliko-Tuberkulose)

by Dr. med. GUSTAV SEPKE, director of the Silicosis Investigation Office in Zwickau, a branch of the Berlin-Lichtenberg Academy of Social Hygiene, Industrial Hygiene, and Medical Continuation Studies, and director of the Zwickau-Province Tuberculosis Advisory Centre.

VII, 177 pages, 135 x-ray pictures, 21 × 30 cm. 1961  
Linen 36.60 Marks.

After a short account of the difficulties of diagnosis, the signs and symptoms of tuberculosis, silicosis, and silico-tuberculosis are presented in detail. Then the clinical treatment of silico-tuberculosis is discussed with directions for assessing its severity. From the description of acute silicosis the author proceeds to the description of Caplan's syndrome and the differential diagnosis of silico-tuberculosis. The concluding chapter discusses recent legislation concerning compulsory compensation in cases of silico-tuberculosis and the success achieved in the treatment of the disease. The text is illustrated by a selection of x-ray photographs.
