
Division of Community Medicine and Behavioural Science

Faculty of Medicine

Memorial University of Newfoundland

St. John's, Newfoundland

Applications are invited for the following positions:—

1. **Associate Professor of Health Care Delivery**

Health professional with experience in Canadian health services administration, in teaching and preferably in health care research.

2. **Assistant/Associate Professor in Public Health/Preventive Medicine**

Appropriate graduate qualifications with experience in teaching and interests in developing research in health education, preventive medicine and related fields.

3. **Assistant Professor of Epidemiology**

Experience in the field of non-communicable diseases and/or environmental medicine. Opportunities for participation in ongoing research in cardiovascular diseases and cancer epidemiology.

4. **Assistant Professor of Biostatistics**

Experience in a medical field particularly in population studies. Ability to offer statistical advice to a wide range of biomedical investigators.

Salaries will be offered by negotiation.

Duties involve teaching undergraduate and graduate medical students and development of or participation in research in a wide range of problems of health and health care delivery in Newfoundland and Labrador.

Enquiries and applications (with current curriculum vitae) to: Dr. R. M. Mowbray, Associate Dean, Faculty of Medicine, Memorial University, St. John's, Newfoundland, Canada.

How to start an epidemic.

FLU immunisation is quick and painless

This poster (in colour) is one of the powerful designs available free together with explanatory leaflets and consent forms, to help your immunisation programme.

30 million working days lost in one year.

Incredible as it may sound, flu caused the loss of roughly 30 million working days in 1969/70 – more than three times the working time lost through industrial action. Admittedly, that was regarded as an 'epidemic' year – but there were still over one million influenza benefit claims made in the previous year, which was regarded as normal.

The conclusion is obvious. Flu is more than just a seasonal nuisance – to the employer it can mean a fall in productivity, damaging at best, crippling in the event of a full-scale epidemic.

Immunisation with Admune provides the answer.

ADMUNE

The purely British flu vaccine

A NEW LOOK AT INFECTIOUS DISEASES

from the **British Medical Journal**

Infectious diseases remain as much a medical challenge as ever, and the articles collected in book form under the title *A New Look at Infectious Diseases* cover many aspects of diagnosis and treatment. The widespread use of newer antibiotics and increased risk of spread by travel are all dealt with, as well as the problems of diagnosis produced by present day doctors' unfamiliarity with many diseases, which were formerly so common and widespread.

Price £2.00 (U.S.A. \$6.00) including postage
