

Accepted for publication May 1987

**Corrections**

On page 150, the two lines below formula (2) should read:

where \( \lambda = \text{average} \left( \frac{s^2}{\text{Var}(m')} \right) \), \( a_1 = \frac{t}{\sum \left( t_i - t \right)^2} \) and \( a^2 = \frac{\sum t_i^2}{\sum \left( t_i - t \right)^2} \).

Formula (3) should read

\[
\frac{\text{Var}(\theta)}{(a_1 + a_2 \theta)^2} \sim \frac{\text{Var}(\theta')}{(a_1 + a_2 \theta')^2} + \frac{2X^2}{(1-\lambda a_2)^2} \left[ \frac{1}{f} + \frac{1}{f_1} \right]
\]

On the third line of the subsequent paragraph \( w' \) should be \( w' \).

In the right hand side of the appendix table under the headings 'Adjusted regression coefficients' \( \theta' \) should be \( \theta \).
