

ENTERING ITS FOURTH SUCCESSFUL YEAR

Cancer Causes and Control

An International Journal of Studies of Cancer
in Human Populations

Editor: B MacMahon, Harvard University School of Public Health, Boston, USA

Assisted by a distinguished international Editorial Board

Cancer Causes and Control brings together previously dissipated studies concerned with the causes, control and subsequent prevention of cancer within population groups. This area of research has made a significant contribution to the overall knowledge of cancer causes. *Cancer Causes and Control* seeks to encourage further investigations in this area, including such topics as variation in cancer distribution within and between populations; factors associated with cancer risk; preventive and therapeutic interventions on a population scale; economic, demographic and health policy, and related methodological issues. It is also concerned with the costs and benefits of current successes in the treatment of cancer.

Papers are normally published between 8 to 12 weeks from acceptance. The Editors invite submission of research papers. Sample copies, which include Instructions to Authors, are available on request.
