

Supplementary Table S1. Correlation among social relationship variables

|                     | Contact<br>(relatives) | Contact<br>(friends) | Group<br>participation | Work<br>engagement | Support<br>(family) | Support<br>(relatives) | Support<br>(friends) |
|---------------------|------------------------|----------------------|------------------------|--------------------|---------------------|------------------------|----------------------|
| Married             | .049**                 | -.002                | .057**                 | .122**             | .378**              | -.091**                | -.129**              |
| Contact (relatives) |                        | .170**               | .072**                 | .035**             | .021*               | .176**                 | .037**               |
| Contact (friends)   |                        |                      | .285**                 | .073**             | .033**              | .090**                 | .232**               |
| Group participation |                        |                      |                        | .074**             | .064**              | .078**                 | .161**               |
| Work engagement     |                        |                      |                        |                    | .070**              | -.044**                | .021*                |
| Support (family)    |                        |                      |                        |                    |                     | -.051**                | -.015                |
| Support (relatives) |                        |                      |                        |                    |                     |                        | .258**               |

\*:  $p < .05$ ; \*\*:  $p < .01$

Note: Spearman's rho coefficients are shown
