

Tobacco and alcohol consumption and the risk of frailty and falling: a Mendelian randomization study

Supplementary Information

Definition of traits (*Nature. 2022 Dec;612(7941):720-724*)

Smoking Initiation (SmkInit)

1. Binary phenotype with any participant reporting ever being a regular smoker in their life (current or former) coded “2”, while any participant who reported never being a regular smoker in their life coded “1”.
2. Does not include information about pipes/cigar/chew, or other non-cigarette forms of tobacco use.
3. This phenotype was measured in a variety of ways.
 - a. Have you smoked over 100 cigarettes over the course of your life?
 - b. Have you ever smoked every day for at least a month?
 - c. Have you ever smoked regularly?

Age of Initiation of Regular Smoking (AgeSmk)

1. Age (in years) at which an individual started smoking cigarettes regularly
2. Does not include information about pipes/cigars/chew, or other non-cigarette forms of tobacco use.
3. Measured in a variety of ways:
 - a. At what age did you begin smoking regularly?
 - b. How long have you smoked? Combined with What is your current age?

Cigarettes per Day (CigDay)

1. Defined as the average number of cigarettes smoked per day, either as a current smoker or former smoker. Individuals who either never smoked, or for whom there is no available data (e.g., someone was a former smoker, but for whom former smoking was never assessed) were set to missing.
2. For studies that collected a quantitative measure of cigarettes per day, where the respondent is free to provide any integer (e.g., 13 cigarettes per day) responses were binned as follows.
 - a. 1 = 1–5
 - b. 2 = 6–15
 - c. 3 = 16–25
 - d. 4 = 26–35
 - e. 5 = 36+
3. For studies with pre-defined bins, the pre-defined bins were used.
4. Does not include information about pipes/cigars/chew, or other non-cigarette forms of tobacco use.
5. Cigarettes per day was measured with a single question for most contributing studies using, for example:
 - a. How many cigarettes do you smoke per day?
 - b. How many cigarettes did you smoke per day?

Smoking Cessation (SmkCes)

1. Binary phenotype with current smokers coded as “2”, former smokers coded as “1”, and never smokers coded as missing.
2. Does not include information about pipes/cigars/chew, or other non-cigarette forms of tobacco use.
3. Usually measured through a combination of questions, including:
 - a. Do you currently smoke? and Have you ever smoked regularly?
 - b. Do you smoke? and Have you smoked over 100 cigarettes in your entire life?

Drinks per Week (DrnkWk)

1. Defined as the average number of drinks a participant reported drinking each week, aggregated across all types of alcohol. If a study recorded binned response ranges (e.g., 1–4 drinks per week, 5–10 drinks per week) we used the midpoint of the range. For example, if an individual reported 1–5 drinks per week, we assume they drank 2.5 drinks per week on average.
2. This was measured in a variety of ways.
 - a. In the past week, how many alcoholic beverages did you have?
 - b. Thinking about the past year, on the average how many drinks did you have each week?
3. This phenotype was left-anchored at 1 and log-transformed prior to analysis, in order to prevent outliers from having undue leverage on analyses.

Supplementary Tables

Supplementary Table S1. List of harmonized instrumental variables for each exposure-outcome pair used in this MR study.

Supplementary Figures

Supplementary Figure S1 Leave-one-out plots displayed the causal associations of Initiation of smoking with frailty index (A) and falling risk (B), respectively. MR, Mendelian randomization.

Supplementary Figure S2 Leave-one-out plots displayed the causal associations of Age of initiation of smoking with frailty index (A) and falling risk (B), respectively. MR, Mendelian randomization.

Supplementary Figure S3 Leave-one-out plots displayed the causal associations of Cigarettes per day with frailty index (A) and falling risk (B), respectively. MR, Mendelian randomization.

Supplementary Figure S4 Leave-one-out plots displayed the causal associations of Cessation smoking with frailty index (A) and falling risk (B), respectively. MR, Mendelian randomization.

Supplementary Figure S5 Leave-one-out plots displayed the causal associations of Drinks per week with frailty index (A) and falling risk (B), respectively. MR, Mendelian randomization.
