* Each effect measure compares the % who would know their status if nobody received DREAMS to the % who would know their status if everyone received DREAMS (analogous to the interpretation of a trial). All effects obtained are marginal.

[^] The effect measure reported in Table 3, repeated here for comparison with alternative approaches.

Table S4(a). HIV testing experiences and modalities in Nairobi, overall and by DREAMS invitation stratified by age group

All	Overall		Age Group 15-17				Age Group 18-22			
	N	% (col)	Invited		Not Invited		Invited		Not Invited	
Blue=Cohort who have not been tested			N	% (col)	N	% (col)	N	% (col)	N	% (col)
Red=Cohort who have been tested										
Did you use HIV testing services in the past 12 months?
